THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

DETAILED ACTION

1. This communication is in response to the Arguments filed on 12/29/2010. Claims 3, 6-8, 11, 21, 22, 23, 30 and 31 are pending. The Applicants' amendment and remarks have been carefully considered and the case is in condition for allowance.
2. All previous objections and rejections directed to the Applicant's disclosure and claims not discussed in this Office Action have been withdrawn by the Examiner.

Reasons for Allowance

3. Claims 3, 6-8, 11, 21, 22, 30 and 31 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The closest prior art of record Jin teaches a base layer coding section (see [0015], 1st encoder 241) that encodes an input signal per base frame units and obtains a base layer coded code (see [0015]) (e.g. The input into the 1st encoder is the down-sampled signal.); a decoding section that decodes the base layer (see [0015], local decoder 251) and obtains a decoded signal (see [0015]) (e.g. The local decoder decodes the signal from the encoder 241.); an enhancement layer coding section (see [0015], 2nd encoder 242) that encodes the plurality of residual signals in units of an enhancement frame (see [0015] and [0016]); a multiplexing section (see [0016], multiplexing section 31) that multiplexes the base layer code and the enhancement layer coded code to output a multiplexed code (see [0016], where the multiplexing operation is performed and output as a single code C); a frequency domain transform section that transforms the plurality of residual signals in the frequency domain and

obtains a plurality of frequency domain transform coefficients (see [0021], where the discrete cosine transform is performed in the difference signal); quantization domain coding section that encodes information for each base frame (e.g. the frequency domain transform coefficients) and obtains the enhancement layer code (see [0021], quantization section 48, quantizes information for enhancement coder based on acoustic weighting section). However, Jin does not specifically teach the frame division section, frequency domain transform coefficients on a two dimensional plane and the domain divider, and the quantization determining section that determines a part of the plurality of domains to be quantization targets based on power spectrum.

Nomura does teach frame division section that divides a frame shorter than that of the base frame (see [0027]-[0029], frame dividing network 201 divides the input signal into frames and then subframe dividing network divides the frames into subframes.). However, Nomura does not specifically teach frequency domain transform coefficients on a two dimensional plane and the domain divider and the quantization determining section that determines a part of the plurality of domains to be quantization targets based on power spectrum.

Najafzadeh-Azghandi does teach a quantization domain determining section (see page 109, sect. 5.7.3, 1st paragraph, determination as to which bands are above the masking threshold are determine) that determines a part of the plurality of domains to be quantization targets (see page 109, sect. 5.7.3, 1st paragraph, bands above the masking threshold are quantization targets) based on power spectrum values of the frequency domain transform coefficients within each domain and outputs domain

information showing the part of the plurality of domains (see page 109, sect. 5.7.3, 1st paragraph, energy of the bands compared to the thresholds and uses the domains for allocating bits, thus output); and a quantization domain coding section that encodes the domain information (see page 109, sect. 5.7.3, 1st paragraph, where the bits are assigned to the critical bands above the masking threshold only, thus only the domains for which the threshold is exceeded) and the frequency domain transform coefficients within the part of the plurality of domains shown by the domain information. However, Najafzadeh-Azghandi does not specifically teach frequency domain transform coefficients on a two dimensional plane and the domain divider dividing the frequency domain transform coefficients into a plurality of domains on the two dimensional plane grouped continuously along a time axis.

Painter does teach the teach frequency domain transform coefficients on a two dimensional plane (see page 467, sect. III, left column, 1st paragraph time-frequency plane). However, Painter does not specifically teach the domain divider dividing the frequency domain transform coefficients into a plurality of domains on the two dimensional plane grouped continuously along a time axis.

The closest prior art of record for the above limitation divides the input signal into subbands. These subbands are then transformed into frequency domain coefficients with respect to time using an MDCT. However, none of the prior arts of records divides *the frequency domain transform coefficients into a plurality of domains on the two dimensional plane grouped continuously along a time axis*. The use of this proposed

technique enables fewer bits and a lower bit rate to be realized upon coding of the quantization targets or domains based on the perceptual masking threshold.

None of the cited references either alone or in combination thereof teaches the combination of limitations of "base layer coding section", "decoding section," "subtraction section," "frame division section," "enhancement layer coding section," "multiplexing section", "frequency domain transform section," "domain divider," as "quantization domain determining section," "quantization domain coding section" as recited in claims 21 and 30, and further the decoding claims as recited in claims 22 and 31. Specifically, the limitation of "a domain divider that divides the plurality of frequency domain transform coefficients into a plurality of domains on the two dimensional plane such that each domain includes at least a plurality of frequency domain transform coefficients which are grouped continuously along a time axis".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
